

# From Noncommutative Calculus to a (Sheafy-)Cyclic Structure

Rebecca Wei

Northwestern University

Date/Event

# Background

## Theorem

(Hochschild-Kostant-Rosenberg, '62) Let  $A$  be a regular, commutative algebra over a field  $k$  of characteristic 0. Then,

$$\begin{aligned}(C_{\bullet}(A, A), b) &\xrightarrow{\sim} \Omega_{A/k}^{\bullet} \\ (C^{\bullet}(A, A), \delta) &\xrightarrow{\sim} \wedge^{\bullet} T_A = \wedge^{\bullet}(\operatorname{Der}_k(A, A)).\end{aligned}$$

# Background

# A cyclic object in dg cocategories

Fix an algebra,  $A$ .

Define a dg category,  $Hoch(A)$ .

Take  $Bar(Hoch(A))$ .

$$Bar(Hoch(A)) \otimes Bar(Hoch(A)) \xrightarrow{\bullet} Hoch(A)$$

$$\psi\{\phi_1, \dots, \phi_n\}(a_1, \dots, a_q) = \sum_{1 \leq i_1 \leq \dots \leq i_n \leq q} \pm \psi(a_1, \dots, a_{i_1}, \phi_1(a_{i_1+1}, \dots), \dots, \phi_n(a_{i_n+1}, \dots), \dots)$$

# A cyclic object in dg cocategories

Fix an algebra,  $A$ .

Define a dg category,  $Hoch(A)$ .

Take  $Bar(Hoch(A))$ .

$$Bar(Hoch(A)) \otimes Bar(Hoch(A)) \xrightarrow{\bullet} Hoch(A)$$

# A cyclic object in dg cocategories

Fix an algebra,  $A$ .

Define a dg category,  $Hoch(A)$ .

Take  $Bar(Hoch(A))$ .

In this context, braces,  $\bullet$ , give multilinear maps:

$$\begin{array}{ccc} Bar(Hoch(A)) \otimes Bar(Hoch(A)) & \xrightarrow{\bullet} & Hoch(A) \\ & \searrow \bullet & \uparrow \\ & & Bar(Hoch(A)) \end{array}$$

Then,  $(Bar(Hoch(A)), \bullet)$  is an algebra in  $DGCocats$ .

# A cyclic object in dg cocategories

Fix an algebra,  $A$ .

Define a dg category,  $Hoch(A)$ .

Take  $Bar(Hoch(A))$ .

In this context, braces,  $\bullet$ , give multilinear maps:

$$\begin{array}{ccc} Bar(Hoch(A)) \otimes Bar(Hoch(A)) & \xrightarrow{\bullet} & Hoch(A) \\ & \searrow \bullet & \uparrow \\ & & Bar(Hoch(A)) \end{array}$$

Then,  $(Bar(Hoch(A)), \bullet)$  is an algebra in  $DGCocats$ .

But we have more...

# A cyclic object in dg cocategories

# A cyclic object in dg cocategories

Fix algebras,  $A_0, A_1, \dots, A_n$ .

We will define a dg cocategory  $B(A_0 \rightarrow A_1 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$   
where  $B(A_0 \rightarrow A_0) := \text{Bar}(\text{Hoch}(A_0))$  for  $n=0$ .

# A cyclic object in dg cocategories

Fix algebras,  $A_0, A_1, \dots, A_n$ .

We will define a dg cocategory  $B(A_0 \rightarrow A_1 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$

where  $B(A_0 \rightarrow A_0) := \text{Bar}(\text{Hoch}(A_0))$  for  $n=0$ .

Objects:  $\{A_0 \xrightarrow{f_0} A_1 \xrightarrow{f_1} \dots \xrightarrow{f_{n-1}} A_n \xrightarrow{f_n} A_0\}$

A morphism from  $(A_0 \xrightarrow{f_{0,0}} \dots \xrightarrow{f_{n,0}} A_0)$  to  $(A_0 \xrightarrow{f_{0,k_0}} \dots \xrightarrow{f_{n,k_n}} A_0)$ :

$$\phi_{ij} \in C^\bullet(A_{i,f_{i,j-1}} A_{i+1,f_{i,j}})$$

# A cyclic object in dg cocategories

## Example

We have a dg functor

$$\hat{\tau}_n : B(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0) \rightarrow B(A_n \rightarrow A_0 \rightarrow \dots \rightarrow A_n)$$

$$Obj : (f_0, \dots, f_n) \mapsto (f_n, f_0, \dots, f_{n-1})$$

# A cyclic object in dg cocategories

## Example

For  $n \geq 1, 0 \leq j < n$ , we have a dg functor

$$\hat{\delta}_{j,n} : B(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0) \rightarrow B(A_0 \rightarrow \dots \rightarrow A_j \rightarrow A_{j+2} \xrightarrow{(mod\ n+1)} \dots \rightarrow A_0)$$

$$Obj : (f_0, \dots, f_n) \mapsto (f_0, \dots, f_{j+1} f_j, \dots, f_n)$$

# A cyclic object in dg cocategories

## Example

For  $n \geq 0, 0 \leq i \leq n$ , we have a dg functor

$$\hat{\sigma}_{i,n} : B(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0) \rightarrow B(A_0 \rightarrow \dots \rightarrow A_i \rightarrow A_i \rightarrow \dots \rightarrow A_0)$$

$$Obj : (f_0, \dots, f_n) \mapsto (f_0, \dots, f_{i-1}, id_{A_i}, f_i, \dots, f_n)$$

# A sheafy-cyclic object in DGCocat

## Definition

Let  $\chi$  be the category with objects  $\{A_0 \rightarrow A_1 \rightarrow \dots \rightarrow A_n \rightarrow A_0\}$  and morphisms compositions of

$$\text{rotations } \tau_n : \mathcal{A} \mapsto (A_n \rightarrow A_0 \rightarrow \dots \rightarrow A_n)$$

$$\text{coboundaries } \delta_{j,n} : \mathcal{A} \mapsto (A_0 \rightarrow \dots \rightarrow A_j \rightarrow A_{j+2 \pmod{n+1}} \rightarrow \dots \rightarrow A_0)$$

$$\text{codegeneracies } \sigma_{i,n} : \mathcal{A} \mapsto (A_0 \rightarrow \dots \rightarrow A_i \rightarrow A_i \rightarrow \dots \rightarrow A_0)$$

where  $\mathcal{A} := (A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$ , subject to the cyclic relations.

# A sheafy-cyclic object in $DGCocat$

## Definition

Let  $\chi$  be the category with objects  $\{A_0 \rightarrow A_1 \rightarrow \dots \rightarrow A_n \rightarrow A_0\}$  and morphisms compositions of

$$\text{rotations } \tau_n : \mathcal{A} \mapsto (A_n \rightarrow A_0 \rightarrow \dots \rightarrow A_n)$$

$$\text{coboundaries } \delta_{j,n} : \mathcal{A} \mapsto (A_0 \rightarrow \dots \rightarrow A_j \rightarrow A_{j+2 \pmod{n+1}} \rightarrow \dots \rightarrow A_0)$$

$$\text{codegeneracies } \sigma_{i,n} : \mathcal{A} \mapsto (A_0 \rightarrow \dots \rightarrow A_i \rightarrow A_i \rightarrow \dots \rightarrow A_0)$$

where  $\mathcal{A} := (A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$ , subject to the cyclic relations.

## Proposition

We have a functor  $\chi \rightarrow DGCocat$

$$\text{Objects} : (A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0) \mapsto B(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$$

$$\text{Generating morphisms} : \lambda \mapsto \hat{\lambda}$$

# Motivating Question

Each dg cocategory  $B(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$  has a dg comodule  $C(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$  (which is a categorified version of the bar complex of Hochschild chains as a module over Hochschild cochains via contraction).

# Motivating Question

Each dg cocategory  $B(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$  has a dg comodule  $C(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0)$  (which is a categorified version of the bar complex of Hochschild chains as a module over Hochschild cochains via contraction).

**Motivating Question:** Can we extend the sheafy-cyclic structure to the comodules? In other words, can we give a functor

$$\chi \rightarrow \mathcal{D} := \{(dg\ cocat, dg\ comod)\}?$$

# Motivating Question

$$d_{\mathcal{D}_\infty}(F, F_!) = (F, [d, F_!] = d_{F^* C_0} \circ F_! \pm F_! \circ d_{C_1})$$

$F^* C_0$  is the categorified version of co-extension of scalars:

$$F^* C_0 = \ker(B_1 \otimes C_0 \rightrightarrows B_1 \otimes B_0 \otimes C_0)$$

# Dg comodules over dg cocategories

## Definition

A **dg comodule**  $C$  over a dg cocategory  $B$  consists of the following data:

- for each object  $f \in B$ , a complex  $C^\bullet(f)$ , and
- maps of complexes

$$\Delta_C(f) : C^\bullet(f) \rightarrow \prod_{g \in \text{Obj}(B)} B^\bullet(f, g) \otimes C^\bullet(g).$$

such that the following diagrams for coassociativity and counitality commute:

$$\begin{array}{ccc} C^\bullet(f) & \xrightarrow{\Delta_C} & \prod_{g \in \text{Obj}(B)} B^\bullet(f, g) \otimes C^\bullet(g) \\ \Delta_C \downarrow & & \downarrow id_B \otimes \Delta_C \\ \prod_{g \in \text{Obj}(B)} B^\bullet(f, g) \otimes C^\bullet(g) & \xrightarrow{\Delta_B \otimes id_C} & \prod_{g, g' \in \text{Obj}(B)} B^\bullet(f, g) \otimes B^\bullet(g, g') \otimes C^\bullet(g') \end{array}$$
  

$$\begin{array}{ccc} C^\bullet(f) & \xrightarrow{\Delta_C} & \prod_{g \in \text{Obj}(B)} B^\bullet(f, g) \otimes C^\bullet(g) \\ & \searrow id & \downarrow \epsilon_B \otimes id_C \\ & & C^\bullet(f) \end{array}$$

# Dg comodules over dg cocategories

# An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

**Defining**  $\tau_1!$

The diagram illustrates a relationship between two  $A_\infty$ -functors. On the left, a sequence of objects  $A_0 \rightarrow A_1 \rightarrow A_0$  is shown. The first arrow is labeled  $f_{0,1}$ , and the second is  $f_{1,0}$ . A curved arrow from  $A_0$  to  $A_1$  is labeled  $f_{0,0}$  above and  $\alpha$  below. A curved arrow from  $A_1$  to  $A_0$  is labeled  $id_{A_0}$  below. A blue arrow labeled  $\phi$  points from the  $f_{0,0}$  arrow to the  $f_{0,1}$  arrow. On the right, a similar sequence  $A_1 \rightarrow A_0 \rightarrow A_1$  is shown, with arrows labeled  $f_{1,0}$  and  $f_{0,0}$ . A curved arrow from  $A_1$  to  $A_0$  is labeled  $\alpha'$  below, and a curved arrow from  $A_0$  to  $A_1$  is labeled  $id_{A_1}$  below. A central arrow labeled  $\tau_1!$  points from the left diagram to the right diagram.

The  $A_\infty$  relations mean:

- $\tau_1!$  is a map of complexes
- $B^2 = 0$
- The following diagram commutes:

$$\begin{array}{ccc} C(\mathcal{A}) & \xrightarrow{\tau_1!} & \hat{\tau}_1^* C(\tau_1 \mathcal{A}) \\ \downarrow B & & \downarrow \hat{\tau}_1^* B \\ C(\mathcal{A}) & \xrightarrow{\tau_1!} & \hat{\tau}_1^* C(\tau_1 \mathcal{A}) \end{array}$$

## An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

For higher  $n > 1$ , we want to find a homotopy between “ $\tau_n^{n+1}$ ” and  $id$ .

## An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

For higher  $n > 1$ , we want to find a homotopy between “ $\tau_n^{n+1}$ ” and  $id$ . However, it is sufficient to find a homotopy between  $\hat{\tau}_n^{*2} \delta_{0,n}! \circ \hat{\tau}_n^* \tau_n! \circ \tau_n!$  and  $\hat{\delta}_{n-1,n}^* \tau_{n-1}! \circ \delta_{n-1,n}!$ .

$$\begin{array}{ccccc} [n] & \xrightarrow{\tau_n} & [n] & \xrightarrow{\tau_n} & [n] \\ \downarrow \delta_{n-1,n} & & & \swarrow \delta_{0,n} & \\ [n-1] & \xrightarrow{\tau_{n-1}} & [n-1] & & \end{array}$$

## An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

For higher  $n > 1$ , we want to find a homotopy between “ $\tau_n^{n+1}$ ” and  $id$ . However, it is sufficient to find a homotopy between  $\hat{\tau}_n^{*2} \delta_{0,n}! \circ \hat{\tau}_n^* \tau_n! \circ \tau_n!$  and  $\hat{\delta}_{n-1,n}^* \tau_{n-1}! \circ \delta_{n-1,n}!$ .

$$\begin{array}{ccccc} [n] & \xrightarrow{\tau_n} & [n] & \xrightarrow{\tau_n} & [n] \\ \downarrow \delta_{n-1,n} & & & \swarrow \delta_{0,n} & \\ [n-1] & \xrightarrow{\tau_{n-1}} & [n-1] & & \end{array}$$

**Strategy:** Find such a homotopy,  $\mathcal{B}$ , for  $n = 2$ , and use  $\hat{\delta}_0^{*n-2} \mathcal{B}$  for  $n > 2$ .

# An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

$$\chi_\infty \rightarrow \mathcal{D}_\infty$$

$$\mathcal{A} \mapsto (B(\mathcal{A}), C(\mathcal{A}))$$

$$\mu = \tau_{n-1} \circ \delta_{n-1,n} = \delta_{0,n} \circ \tau_n^2 \mapsto \begin{pmatrix} \hat{\tau}_{n-1} \circ \hat{\delta}_{n-1,n} = \hat{\delta}_{0,n} \circ \hat{\tau}_n^2 \\ \hat{\tau}_n^{*2} \delta_{0,n!} \circ \hat{\tau}_n^* \tau_{n!} \circ \tau_{n!} \end{pmatrix}$$

$$(\delta_{0,n}, \tau_n^2) \mapsto \begin{pmatrix} \hat{\delta}_{0,n} \circ \hat{\tau}_n^2 \\ 0 \end{pmatrix}$$

$$(\tau_{n-1}, \delta_{n-1,n}) \mapsto \begin{pmatrix} \hat{\tau}_{n-1} \circ \hat{\delta}_{n-1,n} \\ \mathcal{B} \end{pmatrix}$$

$$(\tau_{n-1}, \delta_{n-1,n}, \lambda) \mapsto \begin{pmatrix} \hat{\tau}_{n-1} \circ \hat{\delta}_{n-1,n} \circ \hat{\lambda} \\ 0 \end{pmatrix}$$

$$\vdots$$

# An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

For  $n > 1$ , the  $A_\infty$  relations mean:

- $\tau_{n!}$  is a map of complexes
- $\mathcal{B}^2 = 0$
- We have a pair of homotopic maps:

$$\begin{array}{ccc}
 C(A_0 \rightarrow \dots \rightarrow A_n \rightarrow A_0) & & \\
 \hat{\tau}_n^{*2} \tau_{n!} \circ \hat{\tau}_n^* \tau_{n!} \circ \tau_{n!} & \begin{array}{c} \curvearrowright \\ \downarrow \quad \downarrow \end{array} & (\delta_{n-2, n-1} \widehat{\delta_{n-1, n}})^* \tau_{n-2!} \\
 \text{"apply } \tau_{n!} \text{ 3 times"} & & \text{"brace together the last 3 algebras,} \\
 & & \text{then apply } \tau_{n-2!} \text{ once"} \\
 C(A_{n-2} \rightarrow A_{n-1} \rightarrow A_n \rightarrow A_0 \rightarrow \dots \rightarrow A_{n-2}). & & 
 \end{array}$$

# An $A_\infty$ -functor $\mathcal{F} : \chi_\infty \rightarrow \mathcal{D}_\infty$

For  $n > 1$ , the  $A_\infty$  relations mean:

- $\tau_{n!}$  is a map of complexes
- $\mathcal{B}^2 = 0$
- They are homotopic via two homotopies:

$$\begin{array}{ccc}
 (\widehat{\delta_{n-2,n-1} \delta_{n-1,n}})^* \tau_{n-2!} & \xrightarrow{\cong} & \hat{\delta}_{n-1,n}^* (\hat{\delta}_{n-2,n-1}^* \tau_{n-2!}) \xrightarrow{\hat{\delta}_{n-1,n}^* \mathcal{B}_{n-1}} \hat{\delta}_{n-1,n}^* (\hat{\tau}_{n-1}^* \tau_{n-1!} \circ \tau_{n-1!}) \\
 \text{"brace together } A_{n-2}, A_{n-1}, A_n, \text{ then apply } \tau_{n-2!}" & & \\
 \downarrow \cong & & \downarrow \cong \\
 (\widehat{\delta_{n-2,n-1} \delta_{n-2,n}})^* \tau_{n-2!} & & \hat{\tau}_n^{*2} \tau_{n!} \circ \hat{\delta}_{n-1,n}^* \tau_{n-1!} \\
 \downarrow \hat{\delta}_{n-2,n}^* \mathcal{B}_{n-1} & & \text{"brace together } A_{n-1}, A_n \text{ and apply } \tau_{n-1!}, \text{ then apply } \tau_{n!}" \\
 \downarrow & & \downarrow \tau_n^{*2} \tau_{n!} \circ \mathcal{B}_n \\
 \hat{\delta}_{n-2,n}^* (\hat{\tau}_{n-1}^* \tau_{n-1!} \circ \tau_{n-1!}) & \xrightarrow{\cong} & \hat{\tau}_n^* (\hat{\delta}_{n-1,n}^* \tau_{n-1!}) \circ \tau_{n!} \xrightarrow{\hat{\tau}_n^* \mathcal{B}_n \circ \tau_{n!}} \hat{\tau}_n^{*2} \tau_{n!} \circ \hat{\tau}_n^* \tau_{n!} \circ \tau_{n!} \\
 & \text{"apply } \tau_{n!}, \text{ then brace together } A_{n-1}, A_{n-2} \text{ and apply } \tau_{n-1!}" & \text{"apply } \tau_{n!} \text{ three times"}
 \end{array}$$

# Summary:

We have a given a “homotopically sheafy-cyclic object in dg cocategories with a dg comodule”, i.e., an  $A_\infty$ -functor  $\chi_\infty \rightarrow \mathcal{D}_\infty$ .

Time and interest permitting: “A homotopically sheafy-cyclic object in dg categories with a dg module”

# Summary:

We have a given a “homotopically sheafy-cyclic object in dg cocategories with a dg comodule”, i.e., an  $A_\infty$ -functor  $\chi_\infty \rightarrow \mathcal{D}_\infty$ .

Time and interest permitting: “A homotopically sheafy-cyclic object in dg categories with a dg module”

- Rectify  $\mathcal{F}$  to a dg functor  $U(\chi_\infty) \rightarrow \mathcal{D}_\infty$

$$\mathrm{Hom}_{A_\infty\text{-Cat}}(\chi_\infty, \mathcal{D}_\infty) = \mathrm{Hom}_{\mathrm{DGCat}}(U(\chi_\infty), \mathcal{D}_\infty)$$
